8	COL	4.2% (23.89)	8.3% (12.00)	15.5% (6.47)	4.3%	4.2%
9	NED	3.9% (25.48)	7.8% (12.82)	15.5% (6.45)	4.5%	3.7%
10	NOR	3.2% (31.55)	6.7% (14.99)	14.0% (7.14)	3.0%	3.3%

Distribution complete P(Champion) — top 20 (blend 70/30)

Methodologie

Moteur, donnees, calibration et limitations connues

1. Moteur de base

PELE de Nate Silver (natesilver.net/p/pele-methodology). Elo on h-margin Phase 1 + mean-reversion

Transfermarkt Phase 2.

2. Vraies lambdas Silver

Pour les 72 matchs phase poule, on utilise les lambdas officielles Silver (CSV paypal). 100% des matchs CDM matches.

3. WC shrink 0.9x

Methodo Silver : applique en group stage car les matchs CDM sont plus upsets que la default. Empiriquement valide : MAE vs Pinnacle 6.23 -> 5.27.

4. KO : formule calibree

baseline=1.35, scale=1.2, alpha_tilt=0.2 (RMSE 0.244 buts vs vraies lambdas Silver sur 72 matchs). Tilt ignore en KO (biais mineur).

5. Tiebreakers FIFA

Implementation officielle (FIFA WC 2026 art.13) : H2H pts/diff/buts recursif, fallback diff globale/buts globaux. Cards remplacees par Elo (Monte Carlo).

6. Meilleurs 3emes

8 sur 12 selon regles FIFA + bracket THIRD_PLACE_SLOTS officiel.

7. Bracket KO

R32 -> R16 -> QF -> SF -> Finale, slots officiels FIFA. Tirs au but : sigmoid sur Elo clamped [0.15, 0.85].

8. Monte Carlo

N = 10,000 sims completes. Seed = 42 (reproductible).

9. Comparatif V8 prod

On lance aussi N sims avec la formule V8 prod (baseline 1.25, scale 0.5) pour quantifier les divergences. Voir page 'Divergences V8 vs PELE'.

10. Limitations

Pas de Phase 2 dans notre patch (Transfermarkt mean-reversion absente du KO). Pas de Tilt en KO. Roster

Transfermarkt date snapshot 2025-Q2. Bookmakers Pinnacle : 19/104 matchs couverts (phase poule seulement).

Limitations & sources

A lire avant toute interpretation

- **Modele PELE Phase 2 absente du KO**

Notre formule calibree (1.35/1.2) reproduit la transformation rating $\rightarrow \lambda \pm 0.24$ buts mais sans le mean-reversion Transfermarkt de la Phase 2. Pour la phase poule c'est ok (vraies λ Silver injectees), pour le KO ca peut sous-estimer l'effet roster — partiellement compense par le blend 70/30 avec V8 prod.

- **Tilt rating ignore en KO**

wc_simulator prod ne connait que l'Elo. Le Tilt Silver (propension offensive/defensive) n'est applique qu'en phase poule via vraies λ . En KO, c'est neglige.

- **PELE rating snapshot**

Les ratings PELE chargees datent du dernier scrape datawrapper. Silver met a jour $\sim 1x/jour$, les ratings peuvent avoir bouge depuis.

- **Tirs au but**

Modelises par sigmoid Elo clampee [0.15, 0.85]. Pas de modelisation du gardien ou de la fatigue. Hypothese 50/50 si nul a la fin du temps reglementaire.

- **Bookmakers**

Pinnacle couvre uniquement 19/104 matchs (les + populaires). Le 'value bet' n'a de sens que sur ces matchs.

- **V8 prod (comparatif + blend)**

Lance avec l'Elo pin_calibrated PROD LIVE (artifacts/football-dashboard/pin_calibrated_elo.json, 46 nations).

NB: ne PAS utiliser un snapshot labo gele — il peut manquer des nations recentes (ex ESP) et provoquer un fallback silencieux a 1500. N'utilise pas les overrides forced manuels (roster final CDM 2026 pas encore connu).

- **Pas de blessures, suspensions, forme**

Le modele est purement statique sur les ratings de base. ECT (event change tag) non integre.

- **Phase 2 Silver = score de roster Transfermarkt**

Pour reproduire ESP a 99.7% comme Silver, V8 prod aurait besoin d'integrer un score de roster (valeur 23 joueurs Transfermarkt). Voir piste P2 dans le plan d'evolution.
